

PRESS RELEASE

Konecranes supplies DP World Luanda with 10 lift trucks

Konecranes has delivered Dubai based multinational logistics company DP World with 6 Konecranes reach stackers and 4 empty container handlers to their multipurpose terminal in Luanda, on the southwest African coast. The order was booked in May 2021 and the lift trucks were delivered in December.

DP World is a leading provider of smart logistic solutions and one of the largest port operators in the world. DP World is also present in Angola with the concession to run the multipurpose terminal in Port of Luanda, which is also Angola's primary port. The Port of Luanda operations are looking for a sizable fleet of lift trucks to manage a continuous stream of incoming and outgoing cargo and containers. With upgraded equipment, DP World aims to raise productivity of the port while reducing costs.

"This new delivery really shows the confidence that DP World has in Konecranes," **says Manos Athanasakis, Key Account Manager for Konecranes Lift Trucks.** "We offer durability, reliability and flexibility with port terminal equipment, and with the valuable help of local dealer Trevotech, we are now pleased to bring those qualities to a new site for a long-term customer, DP World. We have built a solid partnership over the years with strong mutual trust."

The 6 new reach stackers are **Konecranes' best-selling SMV 4632 TC5s**, sturdy lifting machines that can safely stack up to 46 tons in the first row, 32 tons in the second, and 17 tons in the third. They are fitted with the Konecranes Static Weighing System that weighs containers to 1 percent accuracy and fully conforms with SOLAS requirements. The empty container handlers are **SMV 6/7 ECC 90s**, with wide masts that provide the option of stacking 6 empty high-cube containers or 7 standard containers. All 10 lift trucks feature the ergonomic [OPTIMA cabin](#) for comfort, wide visibility and improved safety, with reverse Radar System to alert drivers about obstacles behind the truck, as well as a semi-automatic fire suppression system essential in the hot and demanding working conditions in which the lift trucks will operate. Each truck uses a **Tier 3 engine to maintain productivity while minimizing fuel consumption and emissions.**
